Description	
Users can have multiple email addresses.	
Sometimes it's hard to find users via admin->users, if there is huge number of users using Redmine, especially if they have multiple e-mail addresses.	
Filtering users by email and/or first/last name could be helpful, probably by custom fields also.

you can filter users by their email address or domain.

find-user-by-email@2x.png

Yes, but it only displays default email address, not additional ones, which makes it hard to find particular user if there is lots of users.

Also custom fields filtering is good for reports, or filtering users by some other rule, like you want all customers from Paris, if you have custom field City for a customer, etc...

Lot's of people use Redmine as ticketing system, and have customers using it, so they need to help them from admin, etc...
