Description

Please add an option to "sort" or arrange the order of the values in a custom field list. The list becomes unwieldy once the number of items becomes significant.

As an example, my organization uses a custom field list for internal order codes. The field values are along the lines of :

"Maintenance: Applications: Mail: 303550"
"Escalation: Applications: Web: 412741"
"Maintenance: Applications: Database: 303412"

We have ~40 codes, so it takes some time to find the needed order code when logging time.

- Status changed from New to Closed

- Resolution set to Fixed

The values for a custom field is now is textarea with a value on each line.
You can reorder the lines as you need. The values will be sorted in that order in the custom field drop down.
