Redmine - Patch #31147

Add custom styles for all fields

2019-04-04 21:45 - Marius BĂLTEANU

Status:	Closed	**Start date:**	
Priority:	Normal	**Due date:**	
Assignee:	Go MAEDA	**% Done:**	0%
Category:	UI	**Estimated time:**	0.00 hour
Target version:	4.1.0		

Description

Currently, most of the fields (input, textarea, select) don't have any style and the browser renders those fields using its own style (which is different for each browser/OS). The only fields which have a custom style are the fields from login and the custom "Jump to a project" select.

Because of this, it's hard to match some custom styles with the native styles. A good example is the Edit/Preview tabs which have a different border colour from textarea.

I propose to apply the existing custom style to all fields and I'm attaching 2 screenshots with the results and a patch for testing.

I've tested the patch and it looks really great with all the fields having the same style. Very professional.
I've also found a flaw on big screens. Because the caret image is percenutally positioned its distance to the right border varies between fields of different length.

This issue is easy to fix with the calc function of CSS. Perhaps the same style should be applied to the jumpbox, too.

```
select {
  background: #fff url(../images/arrow_down.png) no-repeat calc( 100% - 7px) 50%;
}
```

The styles look clean and modern. It would be great if the change is delivered in 4.1.0.

But I found some small issues.

1. The hight of the rows is too tall if the row has a checkbox

The height of rows in the issues table and the spent time table will be taller than other tables. I think the height of the issues and spent time table should be the same with other tables for the consistency of UI.

[Trackers table with the patch]

2. The button color is gray in Firefox

#5 - 2019-04-06 12:25 - Bernhard Rohloff

IMHO the extra space between the lines helps my eyes to keep track on a specific row. It would be great to keep the extra space and style the missing tables the same way. But I think, that should be a topic of another issue, right. :)

Thank you for testing the patch. I've fixed all 3 in the attached patch.

I found another flaw in the implementation.
Head over to **administration > settings** and look for protocol and wiki history compression.
The select fields are too small and there is not enough padding on the right hand side to show the caret icon correctly.

We also should set the color of the fields background and font to provide a consistent style on dark themed desktops, too.

If you edit an issue on a GTK desktop with Advaita-dark theme for example it looks like this:

Go Maeda, just to know, you have committed the change proposed above by Bernhard as part of the #31391.

Sorry, I didn't know the mistake. Do you think if I should revert r18175 and commit #31391 again?

Not really, I think it is enough to revert only the CSS change and committed it again as part of this ticket.
