jQuery itself releases a plugin called [jQuery Migrate](#) to help with the transition.

The question is, is there any plan to upgrade jQuery?

Hello there,

I am interested in this subject too, as we are using redmine 4.0.3 and security services are putting some pressure on us because of this vulnerability (they are asking me to shut the redmine system down).
Any plan to migrate to latest jQuery version?

Regards,
Philippe

Here is a [patch](#) (I cannot attached it here because of the size - please use the download option or access the patch directly using this [link](#)) that updates jQuery to version 2.2.4. Because we didn't check the entire JS code, I propose to use the [jQuery Migrate](#) library which will help us identifying all the issues that we need to fix before moving to next major version. I think it's safe to commit this as soon as possible and report the issues found by the library.

Hopefully, we can migrate to jQuery 3 or 4 (which is under development) in Redmine [4.2.0](#) or [5.0.0](#).
