

Redmine - Patch #31283

Assign ticket comment by subaddress

2019-04-30 17:36 - Roland Tapken

Target version:			
Description <p>I've created a patch that allows to not only create new tickets by subaddressing (like project_from_subaddress) but also to append comments to a ticket by using the ticket id as subaddress. The patch applies to Redmine 3.4.</p> <p>This allows to forward related mails to 'foobar+1234@example.org' without having to change the mail's subject or message id.</p> <p>Additionally, I added a new configuration option that let Redmine add a 'Reply-To: foobar+1234@example.org' header field, if enabled. Of course, the server need to have support for subaddressing, otherwise those mails would be rejected. Maybe this could be clarified with an additional description.</p> <p>The patch doesn't include test cases since I currently don't have the time to setup a complete build environment but changed the code directly in the live system.</p>
