

Redmine - Patch #31334

Do not lose content when updating a wiki page that has been renamed in the meantime

Description			
<p>This is a corner case, but it happened recently with a client here at Planio.</p> <p>When somebody renames a wiki page while somebody else is editing it, the latter will lose any updates to the content upon save due to the redirect performed by the <code>find_existing_or_new_page</code> before action.</p> <p>This patch adds an integration test that reproduces the behavior, and fixes it by replacing the before action with a simple call to <code>@wiki.find_or_new_page(params[:id])</code> in update.</p>

I had to change the name of the class WikiTest in test/integration/wiki_test.rb to run bin/rails test because it conflicts with the class WikiTest in test/unit/wiki_test.rb. I encountered the following error.

```
/path/to/redmine/test/unit/wiki_test.rb:22:in `
```

Do you think what class name is appropriate?
