

Redmine - Patch #31384

Remove custom lazy loading of i18n files

2019-05-17 16:55 - Pavel Rosický

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.00 hour
Target version:			
Description			
i18n gem was updated in #29946 (4.1.0)			
this caused a regression with these translations			
<pre>numbers: '1': One '2': Two '3': Three I18n.t('1', scope: [:numbers]) Failure/Error: _key = _key.to_sym NoMethodError: undefined method `to_sym' for 2:Integer Did you mean? to_s # ./lib/redmine/i18n.rb:206:in `block in lookup' # ./lib/redmine/i18n.rb:205:in `each' # ./lib/redmine/i18n.rb:205:in `inject' # ./lib/redmine/i18n.rb:205:in `lookup' # /usr/local/rvm/gems/ruby-2.5.3-rails/express/gems/i18n-1.6.0/lib/i18n/backend/base.rb:32:in `translate'</pre>			
the problem is in redmine, because it uses a custom backend that overrides the original behaviour and it wasn't updated accordingly			
see the original PR https://github.com/ruby-i18n/i18n/pull/422			
also this change doesn't work https://github.com/ruby-i18n/i18n/pull/469			
attached patch fixes the problem by removing most of the custom backend in redmine

Jean-Philippe, please take a look at the patch proposed by Pavel as a fix to a problem that was introduced by me when we updated the i18n gem to 1.6.0 ([#29946](#)).

For me, the change looks good, especially because we drop quite a lot of custom code.

#7 - 2019-06-20 10:40 - Jean-Philippe Lang

Sure but it also removes the feature that this custom code provides :-)

#8 - 2019-06-20 10:42 - Jean-Philippe Lang

- Subject changed from fix type-casted translation keys to Remove custom lazy loading of i18n files
- Category set to Code cleanup/refactoring
- Status changed from New to Closed
- Target version deleted (4.1.0)

Patch committed.

#9 - 2019-06-20 14:43 - Pavel Rosický

thanks for the feedback. You're right, i18n gem provides lazy loading for translations, but it loads all available translations at once.

the original redmine backend loaded only the current locale and this optimization was removed.

here's a benchmark on a clean redmine instance (without plugins)

```
1.859000 1.515000 3.374000 ( 3.379579) - load all locales
0.079000 0.063000 0.142000 ( 0.141866) - load the current locale (english)
```

on production all translations should be eager loaded, but on development the first request time is now significantly worse. Do you think it's worth to restore the optimization or improve it in the i18n gem?
