Description

I really love the Copy feature to duplicate an issue and even more for a group of issues.

Example

I have a group of monthly tasks - 5 emails, one SEO page and one data dump. Each month I copy the parent group, rename the child tasks and reset their status ect. However the SEO and Data tasks are in a different project from the email tasks - yet each time I copy the group the new child tasks are all in the same project as the parent group task.

Request

When copying groups of tasks (Parent and Subtasks) preserve the projevct assignment of the subtasks.
