Add support for :sql ActiveRecord::Base.schema_format in redmine:plugins:migrate

ActiveRecord uses db/schema.rb when ActiveRecord::Base.schema_format is :ruby and db/structure.sql when ActiveRecord::Base.schema_format is :sql.

:sql is needed to use SQL that isn't supported by Active Record's migration API. For example, WITH of PostgreSQL's CREATE INDEX isn't supported.

I'm using SQL that isn't supported by Active Record's migration API in [https://github.com/clear-code/redmine_full_text_search](https://github.com/clear-code/redmine_full_text_search).

So it's better that redmine:plugins:migrate also supports :ruby and :sql.
