

Redmine - Defect #3163

Large inline images overflow

2009-04-13 21:32 - Justin Grevich

Status:	Closed	Start date:	2009-04-13
Priority:	Low	Due date:	
Assignee:	Jean-Philippe Lang	% Done:	20%
Category:	UI	Estimated time:	0.00 hour
Target version:	2.5.0	Affected version:	
Resolution:	Fixed		
Description attached images that are larger than the current page size are allowed to overflow past the container. Shouldn't we at least use a css rule to stop the overflow? Is there a simple way around this?

You can set a max-width to all images in #content:

```
svn diff
Index: public/stylesheets/application.css
=====
--- public/stylesheets/application.css      (revision 4358)
+++ public/stylesheets/application.css      (working copy)
@@ -79,6 +79,7 @@
 * html #content{ width: 75%; padding-left: 0; margin-top: 0px; padding: 6px 10px 10px 10px;}
 html>body #content { min-height: 600px; }
 * html body #content { height: 600px; } /* IE */
+#content img { max-width: 100%; }

#main.nosidebar #sidebar{ display: none; }
#main.nosidebar #content{ width: auto; border-right: 0; }
```

Are there other elements than images that may cause overflow?

Apparently IE8 does not implement max-width correctly in some cases: <http://reference.sitepoint.com/css/max-width#compatibilitysection>

I am stepping down from working on Redmine. If someone else is interesting in working on this issue, feel free to reassign it to them.

Attached is a patch for what I've been using. Let me know how it works.

I tested this in Win7 x64 using IE 8.0.7601.17514. Apparently max-width works fine as long as the doc-type is not xhtml strict (<http://davidnaylor.org/blog/2008/09/ie8-and-max-width/> | <http://davidnaylor.org/blog/2009/05/ie8-sorted/>). Perhaps even that has been fixed now in later IE8 versions.

Can anyone report this not working?

#7 - 2011-03-07 21:50 - Justin Grevich

<http://nfine.net/bugs/ie8bug.html> can reproduce the bug with dynamically created images. I tried the same with Redmine's preview and it seems to work correctly.

#8 - 2014-02-08 12:16 - Jean-Philippe Lang

- Subject changed from *attached images are allowed to overflow containers* to *Large inline images overflow*
- Status changed from *New* to *Closed*
- Assignee changed from *Justin Grevich* to *Jean-Philippe Lang*
- Target version set to *2.5.0*
- Resolution set to *Fixed*

Fixed in [r12864](#).

I'm afraid this fix works only for the wiki and not the issue tracker, see [#14021](#).

```
div.wiki img {vertical-align:middle; max-width:100%;}
```

No, this fix is not only for the wiki. The patch is not yet applied here.
