

Redmine - Defect #31693

Bad position for attachment file description field on mobile screens

2019-07-07 13:21 - Eduard Panov

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI - Responsive	Estimated time:	0.00 hour
Target version:		Affected version:	4.0.4
Resolution:			

Description

On mobile screens (iphone 5/se, for example) after attachment some file (in issue edit form, for example) description field cropped. Also, after entering a few characters in description field side menu starts to come out.

To fix it enough:

1. change file /public/javascripts/attachments.js line 63

From:

```
fileSpan.find('input.description, a').css('display', 'inline-block');
```

To:

```
fileSpan.find('input.description, a').css('display', $(window).width() < 899 ? 'block' : 'inline-block');
```

2. Also need add lines to /public/stylesheets/application.css

```
@media screen and (max-width: 400px) {
```

```
.attachments_fields input.description, #existing-attachments input.description { width:280px; }
```

```
}
```
