

issues page - not logged in user (HTML structure errors)

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:			
Resolution:	No feedback	Affected version:	4.0.4

Description

The structure of html for logged and not logged in is different.
can you make it the same?

1 Logged on users. Inside the "issue" block there are child blocks - attachments, issue_tree, relations
<http://prntscr.com/ofan0u>

In the case of a non-logged one, these blocks are not parental, but neighbor blocks
- <http://prntscr.com/ofaqcd>

I would like to get a single structure.

2 items without tag - <td></td>
<http://prntscr.com/ofajwa>
<http://prntscr.com/ofakyv>

- I did not find any difference in the structure of the HTML whether the user is logged in or not. It seems you are using a plugin to display a checklist. Could you check again without plugins?

The figure displays two side-by-side screenshots of a web application interface, comparing an initial state (left) with an updated state (right). Both screenshots show a 'Feature request #2' card. The left card indicates it was 'Added by John Smith almost 14 years ago' and is currently 'Assigned' with a 'Priority: Normal'. The right card shows it was 'Updated almost 14 years ago' and now has a status of 'ステータス: Assigned' (Status: Assigned), '優先度: Normal' (Priority: Normal), and '担当者: Dave Lopper' (Assignee: Dave Lopper). The right card also lists 'Category: Target version: 1.0' and 'Estimated time: 2.05'. Below the cards, the browser's developer tools are open, showing the HTML structure of the cards. The right side's HTML shows updated attributes, such as 'status=Assigned' and 'priority=Normal', reflecting the changes made in the application.

- Status changed from Needs feedback to Closed
