Resolution:	Invalid		

Description

Hello everyone

I want to ask one question. How to select all projects when create the new issue?

When I create one new issue, I only can choose one project. I tried to create one parent project and set all the other projects to be the subprojects of it. But it seems doesn't work very well when I use my own designed issue tracke to create new issue.

Is it possibe to do it in redmine?
