

Redmine - Defect #31838

Improper parsing of wiki links

2019-08-01 19:49 - Tomisław Kityński

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	4.0.1
Resolution:			
<p>Description</p> <p>In case where wiki link is followed by opening parenthesis, it seems like parsing goes wild. For instance this sequence:</p> <pre>One two [[three The Three]] (four) five.</pre> <p>should produce this output:</p> <p>One two <i>The Three</i> (four) five.</p> <p>but it produces this:</p> <p>One two <i>[three The Three]</i> five.</p> <p>It actually acts, as external link, where "four" is the URL, but:</p> <ul style="list-style-type: none">• there is a space between last closing square bracket and opening parenthesis (I would understand this behavior when there would be no space),• square brackets are doubled, but external link mode took precedence over wiki link. <p>Currently one needs to escape opening parenthesis with backslash to force parser to see such a sequence as wiki link, not external link. IMO this looks like a glitch.</p>
