<b>Description</b>			
<p>I have idea of very simple, but powerful plugin: Custom menus.</p> <p>I believe that lot of companies need to customize Redmine a bit. We needed to add custom items to topmost menu and possibly to some other menus. I made changes directly to source code, but it's really no good way, mainly because of updating Redmine via SVN.</p> <p>Plugin can be very simple. There can be sections for different menus in redmine, and add/edit/delete functionality for each menu item. Example:</p> <p>Topmost menu:</p> <ul style="list-style-type: none"><li>• [My Label] [My URL] [delete] (<i>2x string input</i>)</li><li>• [My other label] [delete] [My other URL]</li><li>• ...</li></ul> <p>Add new   Save</p> <p>Another menu: ...</p> <p>so user can add new menu items and for each menu item can add label and url. That's all.</p> <p>Can anyone can help with this?</p> <p>Regards Maxim</p>
