

Redmine - Patch #32146

Add more supported mimetypes

2019-09-26 07:41 - Anonymous

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%

Target version:			
Description			
The patch adds more mime-types which are supported by browsers natively, this is considering that Redmine can now also preview some multimedia formats.

Maybe we don't have to add .svg, .webp, .ico, .ogg, .wav, and .flac because mini_mime knows them.

```
[8] pry(main)> MiniMime.lookup_by_filename("a.svg")&.content_type
=> "image/svg+xml"
[9] pry(main)> MiniMime.lookup_by_filename("a.webp")&.content_type
=> "image/webp"
[10] pry(main)> MiniMime.lookup_by_filename("a.ico")&.content_type
=> "image/vnd.microsoft.icon"
[12] pry(main)> MiniMime.lookup_by_filename("a.ogg")&.content_type
=> "audio/ogg"
[13] pry(main)> MiniMime.lookup_by_filename("a.wav")&.content_type
=> "audio/x-wav"
[14] pry(main)> MiniMime.lookup_by_filename("a.flac")&.content_type
=> "audio/x-flac"
```

#3 - 2019-09-26 10:08 - Go MAEDA

"image/apng" is not a registered media type (<https://www.iana.org/assignments/media-types/media-types.xhtml>). Instead, we can assign "image/png" to ".apng" extension. I was able to preview an APNG animation with the following change.

```

It's for attachment media previewing I suppose.

Or else, does helper Redmine::MimeType.is_type?() also uses mini_mime to check the supported mime-type of a file then?

I was working on feature to enable file previews + side by side revision comparison of multimedia binaries in the repository view, so it's already kind-of partially implemented but only for attachments at the moment -> [#27336](#), but it doesn't work in the repo view as of right now.

For some reason, a helper `Redmine::MimeType.is_type?()` which it seems like, even [#27336](#) relies on, doesn't return any trues on filetypes, unless they are added to `mime_type.rb`, hence it seems like a preview won't happen unless things are added to `mime_type.rb`

Or could I otherwise be doing something wrong?

Yes, thanks for that fix, I used MDN's mime-type list as reference, so hence why I defined it separately.

Yes. For example, .wav is not included in `MIME_TYPES` constant, but `Redmine::MimeType.is_type?` says it is a audio file.

```
[1] pry(main)> Redmine::MimeType.is_type?('audio', 'a.wav')
=> true
```

This is because `mini_mime` is used to determine the media type if the given extension is not included in `MIME_TYPES` constant. The behavior is implemented in `Redmine::MimeType.of`.

```
def self.of(name)
  ext = File.extname(name.to_s)[1..-1]
  if ext
    ext.downcase!
    EXTENSIONS[ext] || MiniMime.lookup_by_extension(ext)&.content_type
  end
end
```

Maybe it is another issue. I confirmed that audio/video preview in the repository browser does not work at all. Please see [#32153](#).

#8 - 2020-04-04 02:53 - Go MAEDA

- Status changed from New to Closed

- Target version deleted (Candidate for next major release)

Many of the extension and MIME type combinations added by this patch are already covered by `mini_magic`.
