

Redmine - Defect #32315

Impossible to validate API key without modifying anything

2019-10-21 22:09 - Nathan Cutler

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: REST API	Estimated time: 0.00 hour
Target version:	Affected version:
Resolution: Fixed	

Description

AFAICT the Redmine API has no way of validating whether a given API key is valid, short of actually attempting a write operation (POST, PUT, DELETE).

With the GitHub API, you can do:

```
curl --silent https://api.github.com/repos/myuser/myrepo/pulls/19999?access_token=invalid
{
  "message": "Bad credentials",
  "documentation_url": "https://developer.github.com/v3"
}
```

Would be great to have something like this in the Redmine API as well! Thanks for the cool software.

History

#1 - 2019-10-21 22:12 - Nathan Cutler

Try, for example:

```
$ curl --silent https://www.redmine.org/issues/32315.json&key=invalid
```

#2 - 2019-10-22 01:06 - Go MAEDA

- Category set to REST API

#3 - 2019-11-04 01:19 - Go MAEDA

In the upcoming Redmine 4.1.0, you can determine if an API key is valid by checking the HTTP status code of a GET request.

Redmine 4.1.0 returns "401 Unauthorized" only when the given credential is incorrect. However, in prior versions, 401 is returned even when REST API is disabled. The behavior change was made by [#30086](#).

```
$ curl --dump-header /dev/stdout 'http://redmine-trunk.test/issues.xml?key=randompassword'
HTTP/1.1 401 Unauthorized
.
.
.
```

#4 - 2020-10-25 08:02 - Go MAEDA

- Related to Feature #30086: Use HTTP status code 403 instead of 401 when REST API is disabled added

#5 - 2020-10-25 08:04 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Fixed

Fixed in Redmine 4.1.0 ([#30086](#)).

You can check if an API is correct or incorrect by sending GET request. The API key is incorrect if HTTP status code is 401.
