Description			
Hi,			
In public/javascripts/application.js The wiki toolbar preview event is written like this :			
<pre>\$('#content').on('click', 'div.jstTabs a.tab-preview', function(event){ ... </pre>			
If we re-write it like this, dynamic added wiki content preview (like the one in modal windows) will work :			
<pre>\$('#body').on('click', '#content.scrum div.jstTabs a.tab-preview', function(event){ ... </pre>			

History

Sorry, wrong syntax in description

- original javascript :
- ```
$('#content').on('click', 'div.jstTabs a.tab-preview', function(event){
...

```
- Enhancement :
- ```
$('#body').on('click', '#content div.jstTabs a.tab-preview', function(event){  
...  

```

It is useful in plugins that have dynamic popups like popup windows.

Thanks a lot in advance to study this simple enhancement.
