Estimated time:0.00 hour

Description

Would it be possible to add Vertical and Horizontal Cell feature on the table creation feature that is currently available. It would also be useful to this available for Headers as well.

Header1	Header2	HMerge	
VMerge			
		HMerge	
No merged			

Reason - Allows for better description details representation.

History

This is already possible (for the Textile¹ and Markdown² formatters). See [RedmineTextFormattingTextile#Tables](#) for Textile³ or [RedmineTextFormattingMarkdown#Tables](#) for Markdown.

For your example (slightly adjusted with header-merging extension and some small modifications to fit the markup parsing), the following **Textile** markup:

```
table{width:40%}.
|_<.Header1  |_<.Header2          |_ \2=,Hmerge          | |
|/2^,VMerge  |                    |&nbsp;      |&nbsp;      |
|             |                    | \2=,HMerge          |
|Not merged  |                    |             |
```

produces:

Header1	Header2	Hmerge	
VMerge			
		HMerge	
Not merged			

¹ Note: Redmine implements Textile markup formatting based on RedCloth 3, not RedCloth 4.

² Note: The Markdown formatting uses regular HTML tags for table markup.

³ For more advanced and detailed Textile (table) markup references, see <http://redcloth.org/hobix.com/textile/> and <https://www.promptworks.com/textile>.

Please report back if this suffices for your requirements.
