Description

Trying to create a time tracking entry for another user through rest API with admin user without a role not a member on the project. I'm getting a forbidden 403 return.

Maybe this is related to #3848.

However, through the user interface it works ok.

I've created an workaround for my scripts with the following patch.

--- app/controllers/timelog_controller.rb
+++ app/controllers/timelog_controller.rb
@@ -256,16 +256,13 @@
    render_403
    return false
  end
-end

    def authorize_logging_time_for_other_users
-      if !User.current.allowed_to?(:log_time_for_other_users, @project) && params['time_entry'].present? &&
-          params['time_entry']['user_id'].present? && params['time_entry']['user_id'].to_i != User.current.id
-        render_error :message => t('error_not_allowed_to_log_time_for_other_users'), :status => 403
-        return false
-      end
+      return true
    end

    def find_time_entries
      @time_entries = TimeEntry.where(:id => params[:id] || params[:ids]).
        preload(:project => :time_entry_activities).
        preload(:user).to_a

authorize_logging_time_for_other_users returns false because @project is not set yet. Both methods find_optional_issue and find_optional_project from TimelogController expects :issue_id and :project_id only as root params, not nested params (inside :time_entry).

The fix strictly for this case was to override method find_optional_project in order to accept also params[:time_entry][:project_id]. All tests pass.

Jean-Philippe, could your review the fix, please? Also, we should do the same change for find_optional_issue as well?

Valdir Stiebe Junior, thanks for detecting and reporting the issue. Could you try the fix from the patch?

#6 - 2020-01-12 23:52 - Marius BALTEANU
- Subject changed from Creating time tracking entry through rest API doesn't behaviour like the user interface to Creating time tracking entry for other user through rest API doesn't work
