| <p>Since there is already an easy way to get the CSV time entries report with an HTTP request, it would be great to be able to get it with a REST request.</p> <p>I didn't see a way to do it for now, and I recently posted a StackOverflow question about it (don't hesitate to suggest any workaround here).</p> <p>For the API request I would suggest to keep the same input parameters and the output format (converted to JSON). Like this:</p> <pre>GET /time_entries/report.json?columns=day&criteria%5B%5D=user HTTP/1.1 Host: my.redmine.eu Accept: application/json X-Redmine-API-Key: 07awf6s549b6s5b70s54679s45v</pre> | | | |
