<b>Description</b>			
<p>In the DOM elements that contain the "title" attribute, it appears inside an empty rectangle. If the onmouseover event is removed, the native chrome "title" appears. It seems something related to jquery ui.</p>

This bug still persists even in the latest version.

Updating jquery UI didnt fixed it also.

I ended up fixing some by manually removing the onmouseover event (with js) after the DOM loads.

What web browser do you use? Could you check if the issue is reproducibile with modern browsers such as Firefox, Chrome, and Safari?

Confirmed with chrome, firefox and opera.

I managed to run this after the dom loads:

```
$("#span.field-description").unbind('mouseover');  
$("#content a").unbind('mouseover');
```

It solves the problem

Can you post details about your environment and the theme used? From the screenshots, it doesn't seem to be the default Redmine theme.
