

Redmine - Feature #331

Allow to insert a screen shot easily

Description	
There would be useful to have an easy way to insert an screen shot, for example the way that fogbugz allow. And the screen shot would be nice to be inside the description not as an attachment.

Actually, Source Forge Enterprise Edition does it in the browser. In Windows, you press Alt+Print Screen (that copies the screenshot into clipboard), then click Add Screenshot button on the issue page, a new window opens with some Java applet and voila! -- it automatically retrieves the screenshot from clipboard and attaches it to the bug report.

Sounds wondreful... I'm dreaming about this for months... Starting screen capture app, remembering right shortcup, caputuring, saving file somewhere, switching to browser, uploading file... It's so so so much time consuming, so I almost never do this... unfortunately. I'm voting for this.

This sounds like a job for a Firefox extension (For the reporting site of things).

Having said that nothing breaks a nice layout like arbitrarily embedding an inline screenshot into a page, I prefer to keep everything that isn't text in the attachments.

#4 - 2007-04-27 19:47 - Kurt Robson

I've been dreaming of this ability to grab a screenshot, mark it up, and submit a bug report - with a minimum of keystrokes. Looks like fogbugz nailed it. check out their feature tour

starting here: <http://www.fogcreek.com/FogBugz/50tour/01.html>

since in the rails world we are all building web based apps, if we could integrate the right button into our app - like an issue button somewhere on every page, or possibly in the browser toolbar - to provide similar capability for Redmine, that would be awesome. Redmine would be running as a separate rails app somewhere else of course - so the bug report must be submitted as a web request.

Here is the description...

"FogBugz Screenshot is a simple program for Windows or Macintosh that lets you easily capture images and send them to FogBugz. Clicking on the bug icon takes a snapshot of your screen and opens the Fogbugz Screenshot window, where you can crop the image and add highlights.

The Windows version puts the bug icon in the taskbar at the bottom.

The Macintosh version puts a bug icon in the menu-bar at the top."

Hello,

| *for example the way that fogbugz allow*

I have never used fogbugz.

Please, give more details.

Thanks

- *Status changed from New to Resolved*

This issue has been extensively developed on issue #3816 (<http://www.redmine.org/issues/3816>)

I would close this issue, if I knew how to do it. :-)
