Description	
I think it would be great for the project if it had a simple API which you could use to create an iPhone app.

+1 about APIs. It would be so great if there is a xmlrpc kind of api is there so other programming languages can use such great application for customized reports or creation of tickets outside of redmine.

- Status changed from New to Closed

- Resolution set to Duplicate

These are great ideas but are a big large to request in a single feature. #296 is being used for the REST API and #1277 is about a iPhone specific web view for Redmine.
