The description in doc/INSTALL for cases where ImageMagick is not installed can be removed.

In Redmine 4.1, RMagick is replaced by MiniMagick, so you no longer get error with `bundle install` even if ImageMagick is not installed. The reason why no error occurs is that MiniMagick does not require ImageMagick's development library during installation.

 Optional:
 4. Install the required gems by running:
    `bundle install --without development test`
-   If ImageMagick is not installed on your system, you should skip the
-   installation of the rmagick gem using:
-   `bundle install --without development test rmagick`
-   Only the gems that are needed by the adapters you've specified in your
   database configuration file are actually installed (eg. if your
   config/database.yml uses the 'mysql2' adapter, then only the mysql2 gem
```
