Redmine - Patch #33208
'--without rmagick' option for bundle command is no longer necessary
2020-03-29 11:15 - Go MAEDA

Status: Closed
Priority: Normal
Assignee: Go MAEDA
Category: Documentation
Target version: 4.2.0

Description

The description in doc/INSTALL for cases where ImageMagick is not installed can be removed.

In Redmine 4.1, RMagick is replaced by MiniMagick, so you no longer get an error with 'bundle install' even if ImageMagick is not installed. The reason why no error occurs is that MiniMagick does not require ImageMagick's development library during installation.

 Optional:
 4. Install the required gems by running:
     bundle install --without development test
- If ImageMagick is not installed on your system, you should skip the
- installation of the rmagick gem using:
- bundle install --without development test rmagick
- Only the gems that are needed by the adapters you've specified in your
database configuration file are actually installed (eg. if your
config/database.yml uses the 'mysql2' adapter, then only the mysql2 gem
