I have slightly modified the patch.

- Changed the variable name from css_class to column_name because it is used not only for CSS classes but also for ids
- Changed the way of getting the "parent_subject" format string in order to reduce method calls (5 to 3)

Setting the target version to 4.1.2.

*- Subject changed from The Parent task subject is broken when the width of the column is wider. to Parent task subject column in gantt is not fully displayed when the column is widened*
