

Redmine - Feature #3324

Default version of a project

2009-05-08 16:46 - Zarooba Rozruba

Target version:	
Resolution: Duplicate	
Description Our shop has multiple web apps, meaning that users do not know what version the app is in production (ie: phase 1 vs phase 2). It would be nice to assign a specific default version per project, so that users do not have pick one (Especially since users could pick and file a bug against wrong version). This way anyone (QA especially) can put tickets against upcoming versions, while by default tickets are automatically assigned a previously designated version.
