Target version:	4.2.0		
Resolution:	Fixed		
Description			
<p>Sometimes you need to add a lot of relations to an issue and it's getting really hard when there're 50 or more relations.</p> <p>The patch provides bulk create for relations. Fill an input field with ids (delimited with comma) and press form's button.</p> <pre>{{collapse(example) i7kB9J3qsk2.gif }}</pre>

Revision 20689 - 2020-12-25 03:25 - Go MAEDA

Bulk addition of related issues (#33418).

Patch by Dmitry Makurin and Marius BALTEANU.

Revision 20690 - 2020-12-25 03:31 - Go MAEDA

Allow issue relation autocomplete to select multiple values (#33418).

Patch by Marius BALTEANU.

History

#1 - 2020-05-09 21:51 - Robert Korulczyk

+1. I miss this feature so much...

#2 - 2020-05-16 04:20 - Go MAEDA

- Target version set to Candidate for next major release

#3 - 2020-06-25 15:08 - Go MAEDA

- Related to Feature #29272: Create several relations at the same time via Issue Relations API added

#4 - 2020-09-13 04:15 - Go MAEDA

- Category set to Issues

#5 - 2020-09-29 10:23 - Go MAEDA

I tried out the patch and found it really nice.

The only one small issue of the patch is that issue auto-complete feature does not work. But I think we can resolve it by using Tribute.js which is used for inline auto complete feature (#31989).

I realized that implementing the feature with Tribute.js is not so easy because the auto-complete should be triggered without typing a preceding "#" in the related issues section.

Now I think it is OK even if the feature does not support auto-comple for multiple issue ids because it is a trivial matter compared to the usefulness of this feature.

- File 0002-Allow-issue-relation-autocomplete-to-select-multiple.patch added

- File 0001-Rework-patch-from-33418.patch added

Dmitry, thanks for posting the patch. I find this feature really useful.

Regarding your proposed solution, I don't think that it's a good idea to remove the validation from the model because it will allow setting a non visible issue if you by-pass the controller (from a plugin, for example).

I'm attaching two patches:

1. 0001-Rework-patch-from-33418.patch

Based on the existing patch, but keeping the validation in the model and also fixes some edge-case bugs (for ex: no error if you press Add without typing the issue id).

2. 0002-Allow-issue-relation-autocomplete-to-select-multiple

Adds a new JS autocomplete function that allows searching for multiple values. If the solution is good enough, I'll add a system test for it.

#9 - 2020-12-14 03:49 - Go MAEDA

Marius, thank you for improving the patch. I tried out the patches #33418#note-8 and found they are really nice.

I didn't feel strange compared to the autocomplete in Redmine 4.1.0.

#10 - 2020-12-17 00:15 - Marius BALTEANU

- File deleted (0002-Allow-issue-relation-autocomplete-to-select-multiple.patch)

#11 - 2020-12-17 00:16 - Marius BALTEANU

- File 0002-Allow-issue-relation-autocomplete-to-select-multiple.patch added

- Assignee deleted (Marius BALTEANU)

- Target version changed from Candidate for next major release to 4.2.0

Updated the second patch to include a test.

Let's discuss this for version:"4.2.0".

#12 - 2020-12-25 03:32 - Go MAEDA

- Tracker changed from Patch to Feature

- Subject changed from Issue relation bulk create to Bulk addition of related issues

- Status changed from New to Closed

- Assignee set to Go MAEDA

- Resolution set to Fixed

Committed the patch. Thank you for improving Redmine.

#13 - 2020-12-25 05:34 - Go MAEDA

- Related to deleted (Feature #29272: Create several relations at the same time via Issue Relations API)

- Related to Feature #29272: Create several relations at the same time via Issue Relations API added

#17 - 2020-12-26 14:12 - Marius BALTEANU

- File accept_issue_to_id_as_array.patch added

- Status changed from Closed to Reopened

- Assignee deleted (Go MAEDA)

I'm reopening this to discuss about the API part which is not implemented 100% correctly.

1. Request:

Currently, for bulk addition of related issues, the request should contains the ids as comma-delimited string, please see the below example (param

```
issue_to_id):
  post(
    '/issues/2/relations.xml',
    :params => {:relation => {:issue_to_id => "7, 8", :relation_type => 'relates'}}
  )
```

I think we should accept also an array of ids:

```
post(
  '/issues/2/relations.xml',
  :params => {:relation => {:issue_to_id => [7, 8], :relation_type => 'relates'}}
)
```

The attached patch allows this.

2. Response:

Currently, the response contain only the latest relation added:

```
{
  "relation": {
    "id": 107,
    "issue_id": 2,
    "issue_to_id": 8,
    "relation_type": "relates",
    "delay": null
  }
}
```

I think the response should contain all the created relations:

```
{
  "relations": [
    {
      "id": 114,
      "issue_id": 2,
      "issue_to_id": 7,
      "relation_type": "relates",
      "delay": null
    },
    {
      "id": 115,
      "issue_id": 2,
      "issue_to_id": 8,
      "relation_type": "relates",
      "delay": null
    }
  ]
}
```

but I'm not sure how to handle the case when the response contain both successfully created relations and non-successfully relations. From what I know, we don't have this kind of mixed API response in Redmine.

I see two options:

1. We change the current implementation to be transactional. In this way, we reject the entire request if an error occurs.
2. We respond with succes if at least one relation was created successfully and we append the error messages to the response:

```
{
  "relations": [
    {
      "id": 114,
      "issue_id": 2,
      "issue_to_id": 7,
      "relation_type": "relates",
      "delay": null
    },
    {
      "id": 115,
      "issue_id": 2,
      "issue_to_id": 8,
      "relation_type": "relates",
      "delay": null
    }
  ],
  "errors": [
    "Related issue has already been taken: #3",
  ]
}
```

Any feedback is welcome!
