

Redmine - Feature #3345

Link to view subversion directory changelog

2009-05-12 21:00 - James Wells

Status:	Closed	Start date:	2009-05-12
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:			
Resolution:	Duplicate		
Description <p>In the repository view there is the ability to view the changelog of an individual file or drop down into a subdirectory, however it would be very useful to be able to view the changelog of a directory (as you can with the top-level of a repository).</p> <p>I have a very simple patch to demonstrate this:</p> <pre>Index: app/views/repositories/_dir_list_content.rhtml ===== --- app/views/repositories/_dir_list_content.rhtml (revision 2717) +++ app/views/repositories/_dir_list_content.rhtml (working copy) @@ -19,6 +19,12 @@ <td class="revision"><%= link_to(format_revision(entry.lastrev.name), :action => 'revision', :id => @project, :rev => entry.lastrev.identifier) if entry.lastrev && entry.lastrev.identifier %></t d> <td class="age"><%= distance_of_time_in_words(entry.lastrev.time, Time.now) if entry.lastrev && entry.lastrev.time %></td> <td class="author"><%= changeset.nil? ? h(entry.lastrev.author.to_s.split('<').first) : changes et.author if entry.lastrev %></td> -<td class="comments"><%=h truncate(changeset.comments, 50) unless changeset.nil? %></td> +<td class="comments"> + <%=h truncate(changeset.comments, 50) unless changeset.nil? %> + <%= if entry.is_dir? + link_to '(all)', + {:action => 'changes', :id => @project, :path => to_path_param(entry.path), :rev => @r ev} + end %> +</td> </tr> <% end %></pre> <p>It may be that there is a way to do this already, but I couldn't find it or any mention of it!</p>

This feature request should go up in priority, and have a definite solution. It's a serious drawback in Redmine repository browsing! Before we migrated to Redmine we used Trac, and our Project Managers would constantly use its "change log" feature per repository folder to evaluate the revisions set, committed on that particular folder, and even know when the folder was created (and its origin)...

James workaround is an approximation to a solution, but it's not efficient nor completely effective. From our point of view, a solution like the one adopted by Trac is the way to go:

- when clicking on a Repository folder, besides displaying the folder tree, it should keep listing the revisions set below, but only those made within current folder (and its branches)
- the revisions set should me paginated

- the revisions should break (or at least highlight), the instant/revision when the folder was created and its source (if it was a copy from another branch)
