Category:	Plugin API		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	

Description

Hello everyone,

I have a redmine created where I have multiple clients.
One of them is asking me for the API code to integrate it with TestCollab.

The following questions arise:

a) Giving this password involves a risk to my other clients?
b) Could you give a personalized key for this project and not the global one?
c) For our part, would we have to do something for them to implement redmine in testcollab or simply send them the api key?

Thanks in advance.

Regards!

_____

Hola a todos,

Tengo una redmine creado donde tengo varios clientes.
Uno de ellos me está pidiendo el código API para integrarlo con TestCollab.

Me surgen las siguientes preguntas:

a) ¿Dar esta contraseña implica un riesgo para mis otros clientes?
b) ¿Podría dar una clave personalizada para este proyecto y no la clave global?
c) Por nuestra parte, ¿tendríamos que hacer algo para que implementen redmine en testcollab o simplemente enviarles la clave de la API?

Gracias por adelantado.

¡Saludos!

Thanks in advance.

Regards!

1) The API key belongs to an user and it has the same permissions as the user at the API level (the API key cannot be used to log in the UI).
2) You can create a user with permissions only for that project.
3) It depends on how the integration works, from Redmine you can manage only user permissions for that API key.

Please use forum for questions.

- Status changed from Closed to Reopened

I'm new to the forum, sorry, but I don't understand how it works.

In my redmine it only generates an API code IN GENERAL, it does not create one for each project ...

How can I have an API code only per project?
