Redmine - Feature #33612

Expose repository version via REST API

Resolution:	Duplicate			

Description

For Redmine clients interacting with different versions of the Redmine server it would be beneficial to have an easy way to identify the server version. Currently this information is available in the web UI: <your-host>/admin/info and can be scrapped from the page (e.g. with Jsoup), but it's a hack. Having a REST endpoint with that information exposed would be great.

Or is there a more convenient workaround than the one mentioned above?

On a similar note, being able to get the current value for the 'Maximum attachment size' setting would be also great. I you think this should be a separate request I'm happy to create another ticket to track it.
