<b>Description</b>			
<p>Hello,</p> <p>I was searching this possible feature or plugin to improve security and reduce visibility from admin users, but can't find it. The idea is that a user with administration permissions have two different profiles:</p> <ul style="list-style-type: none"><li>• Projects Work profile: Profile to work like a non-admin user, on this profile the user just can see and work with the roles assigned on projects.</li><li>• Administration profile: Profile to just administration tasks, visibility of admin pane and operations on projects reserved to admins (or not permitted to non-admin users)</li></ul> <p>The swap between profiles must be done by introducing a password, the user password or a secondary password o 2FA e.g., accessible by a button on top like "Connected as XXXX as admin user (swap profile)".</p> <p>Thank you very much, Kind regards.</p>
