

Redmine - Defect #33769

When creating more than two identical attachments in a single db transaction, the first one always ends up unreadable

2020-07-26 10:23 - Jens Krämer

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Go MAEDA	% Done:	0%
Category:	Attachments	Estimated time:	0.00 hour
Target version:	4.0.8	Affected version:	
Resolution:	Fixed		
Description			
<p>Due to the file re-using code running in an after_commit hook, the hooks of any attachments that are created in a common db transaction will be deferred and run one after another after the outer transaction was committed. The existing implementation does not take that into account and as a consequence, when creating more than two identical attachments in a single transaction, the first attachment will end up with a non-existing diskfile.</p> <p>The attached patch includes a test reproducing the issue and a fix, which consists of using last instead of first when finding an existing attachment to re-use. This way, the selected attachment is consistent across all runs of the hook even if multiple candidates exist. I also added an explicit order call for good measure.</p> <p>This is a corner case that should never occur in normal Redmine usage - but may occur in 3rd party code that's creating many attachments wrapped in a transaction.</p>
