| Description | | | |
| <p>Hi,</p> <p>I don't know is this is a bug or I am using it wrong. But anyhow - it is a user-frendy feature.</p> <p>It doesn't matter what version have we - but I have tested and proved this scenario in demo.redmine.org (a few seconds ago).</p> <p>1. (in demo.redmine.org) i created new project and inside the project a new issue. 2. Adding watchers: - If you put a tick before any user > this tick will be removed if you type anything in the user search bar.</p> <p>The same is happening when adding users to groups.</p> <p>Expected behavior: If you put a tick before a username, it should stay selected until you confirm or close the "popup window". It should clear any selections when yu search for a different user.</p> | | | |
