Redmine - Feature #34003

collapsed groups per query

Description
If issues are grouped in a custom query then the grouped issues can be collapsed by klicking on them. It would be helpful if the query had an attribute "collapse" to have all groups collapsed at start.

Whether or not you want to colapse depends on the application.

And I think this ticket is related to #8258 .

#2 - 2020-09-18 15:14 - Stefan Lindner

What I men is:
When I define a custom query AND I select "group by" then there sould be a checkbox "collapse groups" for TNHIS query.
It would be nice to have #8258 too when reloading the query

If a custom query is meant to be collapsed from the start, it should provide pagination based on the grouped items. In the current implementation, collapsing items on a page, only acts on items in the current page.
