| <b>Category:</b>   | Custom fields | <b>Estimated time:</b> | 0.00 hour |
| <b>Target version:</b>   |               |                        |           |
| <b>Description</b><br>For creating the lists and making it even better. It would be important to create a relationship between the contents of the lists by viewing the codes of the values created. So that I have the possibility to have a personalized list that share values from the list. The value of a list must be in several lists. In this case, when passing the values of a list, I can select the values in the list fields, showing the duplicity and the need to create new values for several lists. |               |                        |           |
