Description			
Hi,			
<p>I'm running Redmine 4.1.1 as a Docker container on my server. I'm try to install the Tags plugin by copying the ZIP file redmineup_tags-2_0_8-light.zip and placing it in the plugins directory. When I restart the container the plugin seems to be installed automatically but when I try to configure it in the Settings page, I get a page error. Also every issue page I try to view gets the same error page, probably because the page tries to load the plugin.</p> <p>When I explicitly run the following statement inside the Docker container:</p> <pre>- bundle install - bundle exec rake redmine:plugins NAME=redmineup_tags RAILS_ENV=production</pre> <p>I get the errors below. When I add the 'pg' to the Gemfile, part of the error is gone but I'm getting other errors in return.</p> <p>Anyone an idea why this doesn't work?</p> <p>Ralph</p> <pre>root@213f9e087e8b:/usr/src/redmine/plugins/redmineup_tags# bundle exec rake redmine:plugins NAME=redmineup_tags RAILS_ENV=production (in /usr/src/redmine) rake aborted!
