Description

A date is time of UTC in "SVN repository".
Because others are local time, I am troubled.

Use localtime method, or every user should be able to set own timezone.

There is it in this way now.

```
-----  
--- app/models/svn_repos.rb (revision 521)  
++ app/models/svn_repos.rb (working copy)  
@ -52,7 +52,7 @  
info = Info.new({:root_url => doc.elements["info/entry/repository/root"].text,  
:lastrev => Revision.new({  
:identifier => doc.elements["info/entry/commit"].attributes['revision'],  
:time => Time.parse(doc.elements["info/entry/commit/date"].text),  
:time => Time.parse(doc.elements["info/entry/commit/date"].text).localtime,  
:author => (doc.elements["info/entry/commit/author"]  
? doc.elements["info/entry/commit/author"].text : "")  
})  
})  
@ -90,7 +90,7 @  
:size => (entry.elements['size'] and entry.elements['size'].text).to_i,  
:lastrev => Revision.new({  
:identifier => entry.elements['commit'].attributes['revision'],  
:time => Time.parse(entry.elements['commit'].elements['date'].text),  
+ :time => Time.parse(entry.elements['commit'].elements['date'].text).localtime,  
:author => (entry.elements['commit'].elements['author']  
? entry.elements['commit'].elements['author'].text : "")  
})  
})  
@ -129,7 +129,7 @ =====  
  
revisions << Revision.new({:identifier => logentry.attributes['revision'],  
:author => (logentry.elements['author'] ? logentry.elements['author'].t  
ext :  
""),  
- :time => Time.parse(logentry.elements['date'].text),  
+ :time => Time.parse(logentry.elements['date'].text).localtime,  
:message => logentry.elements['msg'].text,  
:paths => paths  
})
```

Thank you.
