Description

A date is time of UTC in "SVN repository".
I am troubled, because others are local time.

Use localtime method, or every user should be able to set own timezone.

There is it in this way now.

```
=====
--- app/models/svn_repos.rb (revision 521)
++ app/models/svn_repos.rb (working copy)
@ -52,7 +52,7 @
info = Info.new({:root_url => doc.elements["info/entry/repository/root"].text,
:lastrev => Revision.new({
:identifier => doc.elements["info/entry/commit"].attributes["revision"],
- :time => Time.parse(doc.elements["info/entry/commit/date"].text),
:time => Time.parse(doc.elements["info/entry/commit/date"].text).localtime,
:author => (doc.elements["info/entry/commit/author"]
? doc.elements["info/entry/commit/author"].text : "")
})
})
@ -90,7 +90,7 @
:size => (entry.elements["size"] and entry.elements["size"].text).to_i,
:lastrev => Revision.new({
:identifier => entry.elements["commit"].attributes["revision"],
- :time => Time.parse(entry.elements["commit"].elements["date"].text),
+ :time => Time.parse(entry.elements["commit"].elements["date"].text).localtime,
:author => (entry.elements["commit"].elements["author"]
? entry.elements["commit"].elements["author"].text : "")
})
})
@ -129,7 +129,7 @ =====

revisions << Revision.new({:identifier => logentry.attributes['revision'],
:author => (logentry.elements['author'] ? logentry.elements['author'].t
ext :
""),
- :time => Time.parse(logentry.elements['date'].text),
+ :time => Time.parse(logentry.elements['date'].text).localtime,
:message => logentry.elements['msg'].text,
:paths => paths
})

Thank you.
```

Thanks.
Fix committed in rev 587.
