Description			
<p>I just got the dreaded 90% of the filesystem in use and spend some time creating a MySQL query that helps me find the largest attachments.</p>			
<pre>mysql> select attachments.container_id,attachments.filename,sys.format_bytes(attachments.filesize),users.login from attachments right join users on attachments.author_id=users.id where container_id is not NULL order by filesize desc limit 10;</pre>			
<pre>+-----+-----+-----+-----+ -----+ container_id filename sys.format_bytes(attachments.filesize) login -----+-----+-----+-----+ 20956 VID_20191004_083624.mp4 704.22 MiB user1 20956 VID_20190710_145242.mp4 448.04 MiB user1 17897 CompleteMQTG_DGCA_20170226.pdf 443.92 MiB engineer 18162 BoschRexroth_Manual.rar 406.22 MiB user2 14327 ADU indication issue.mp4 389.63 MiB engineer 13816 Engine no 2 Flame out.mp4 382.81 MiB engineer 13816 Engine 1 Flame out.mp4 379.76 MiB engineer 24115 20200611_004044.mp4 374.91 MiB user2 18287 Run System Check.MOV 373.93 MiB user2 20956 VID_20190625_140218.mp4 371.31 MiB user1 -----+-----+-----+-----+ -----+</pre>			
<p>After which I could send out an email asking various users if those attachments are still needed.</p>			
<p>Perhaps this might be useful to someone.</p>
