Category:	Issues		**Estimated time:**	0.00 hour
Target version:				
Resolution:	Invalid		**Affected version:**	4.1.1

Description

I am trying to migrate redmine to docker. I have prepared mysql:5.7 docker and imported db from dump, copied and mounted *attachment* directory as a volume into docker image (https://hub.docker.com/_/redmine).
Some project are accessible, but for most of them I am getting 500 Internal Error - message below.

Migration from:

```
Environment:
  Redmine version                3.2.2.stable
  Ruby version                   2.2.2-p95 (2015-04-13) [x86_64-linux]
  Rails version                  4.2.5.2
  Environment                    production
  Database adapter               Mysql2
SCM:
  Subversion                     1.9.7
  Mercurial                      4.5.3
  Filesystem
  Xitolite                       2.17.1
Redmine plugins:
  recaptcha                      1.0.0
  redmine_agile                  1.4.3
  redmine_bootstrap_kit          0.2.5
  redmine_git_hosting            1.2.2
  redmine_graphs                 0.1.0
  redmine_latex_mathjax          0.1.0
  redmine_local_avatars          0.1.1
  redmine_mylyn_connector        2.8.2.stable
  redmine_revision_branches      0.3.0
  redmine_sidekiq                2.1.0
```

Migration to:

```
Environment:
  Redmine version                4.1.1.stable
  Ruby version                   2.6.6-p146 (2020-03-31) [x86_64-linux]
  Rails version                  5.2.4.2
  Environment                    production
  Database adapter               Mysql2
  Mailer queue                   ActiveJob::QueueAdapters::AsyncAdapter
  Mailer delivery                smtp
SCM:
  Subversion                     1.10.4
  Mercurial                      4.8.2
  Bazaar                         2.8.0
  Git                            2.20.1
  Filesystem
Redmine plugins:
  no plugin installed
```

Error message:

```
I, [2021-01-04T16:30:07.031770 #1]  INFO -- : Completed 500 Internal Server Error in 74ms (ActiveR
ecord: 24.6ms)
F, [2021-01-04T16:30:07.032813 #1] FATAL -- :
F, [2021-01-04T16:30:07.032843 #1] FATAL -- : ActionView::Template::Error (The single-table inheri
tance mechanism failed to locate the subclass: 'Repository::Xitolite'. This error is raised becaus
e the column 'type' is reserved for storing the class in case of inheritance. Please rename this c
olumn if you didn't intend it to be used for storing the inheritance class or overwrite Repository
.inheritance_column to use another column for that information.):

```

History

#1 - 2021-01-05 00:32 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Invalid

Please use forums for questions. Issues are used to report a bug, suggesting a new feature, or submitting a patch. Reading How to request help may be helpful for you.

Since you can see a string "Repository::Xitolite" in the error message, I think redmine_git_hosting plugin caused the error. Maybe it is better to contact the author of the plugin.

#2 - 2022-12-13 13:43 - Dimitar (RedmineUP)

Hi Dawid,

This is Dimitar from the **RedmineUP** Support Team.

I see that you have some of our plugins on your list:

```
redmine_agile
```

So, could you please contact our support team at support@redmineup.com**? And our support engineers will help you investigate the situation.**

We look forward to hearing from you.

Best Regards,
Dimitar from the RedmineUP Support Team
