

Redmine - Defect #34593

privacy problem on users info

2021-01-14 17:23 - Fabrizio Sebastiani

Status:	Needs feedback	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	4.1.1
Resolution:			
Description			
If a logged-in user starts to access cyclically to URLs like this:			
<pre>https://example.com/redmine/users/5 https://example.com/redmine/users/6 https://example.com/redmine/users/7 ...</pre>			
he/she will see and get the full organization's users, members, informations, accounts, email etc... This is a particularly sensible information if the organization needs to hide and protect membership information to all users.			
This looks like a violation of privacy information. Also the organization cannot hide to any member this wide information. Looks like a design lack.

- Status changed from New to Needs feedback

Can you access all those information using an user without permissions?

I can, from my (presumably) unprivileged acct. The 'hide email address' feature seems to work though. Maybe need to add more 'hide [data]' options for other sensitive data fields?

You already have the following settings:

1. Users visibility (All active users / Members of visible projects) at role level.
2. The "hide email address" already mentioned by you.
3. "Users display format" global setting to control how to show the user based on First name and Last name.

which covers all the users standard fields. If you want to be very strict about who has access to user's info, maybe you should review the setting from 1 for all roles.

Regarding more 'hide [data]', do you have custom fields for users? If yes, that makes sense to have the same options to configure the custom field visibility as already exists for issues, spent time, versions or projects.
