

# Redmine - Defect #34634

## Can't add deleted wiki Tab (404)

2021-01-25 09:34 - Ivan Cenov

<b>Status:</b> Confirmed	<b>Start date:</b>
<b>Priority:</b> Normal	<b>Due date:</b>
<b>Assignee:</b>	<b>% Done:</b> 0%
<b>Category:</b> Wiki	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b> 5.1.0	<b>Affected version:</b>
<b>Resolution:</b>	
<b>Description</b>	
<p>This issue is inspired by a thread in the forum (message#61955)</p> <p>An user delete all wiki pages including the root page. Then he could not see the root page and could not create wiki pages any more.</p> <p>The solution was to disable Wiki module and then enable it again. Then the root wiki page appeared again (may be it has been recreated on enabling wiki module).</p> <p>So I think that it should be harder to delete the root wiki page or make it not erasable. However, if it remains erasable, Wiki module should be made inactive when this page is deleted.</p>

### History

#### #1 - 2021-01-25 09:48 - Ivan Cenov

Environment

```
Redmine version 3.4.4.devel
Ruby version 2.4.1-p111 (2017-03-22) [x86_64-linux]
Rails version 5.1.4
Environment production
Database adapter Mysql2
```

#### #2 - 2021-01-25 12:13 - Mischa The Evil

- Status changed from New to Confirmed
- Assignee set to Mischa The Evil

Thanks for opening this issue. I've been reading along and it already got me curious, so I already had a look at the source. I can confirm the reported behavior (at least partially, as far as I've tested). Along the way I found several other issues too.

I'm working on providing a patch.

I confirm this is a problem when a whole *project wiki* is deleted. I don't see this being a problem when deleting *singlewiki pages*.

@Ivan: can you too confirm this (also with the OP of message#61955)?

I have posted a patch that fixes this case as part of #34643 (file: 4. Disable the wiki module after deletion of a project wiki.). It should be applicable on its own.

#### #5 - 2021-01-27 10:22 - Mischa The Evil

- Description updated

#### #6 - 2021-07-26 23:37 - Marius BALTEANU

- File 0004-Disable-the-wiki-module-after-deletion-of-a-project-.patch added

- Assignee changed from Ivan Cenov to Mischa The Evil

- Target version set to 5.0.0

I've extracted the patch proposed by Mischa The Evil in #34643:

| - **4. Disable the wiki module after deletion of a project wiki.**  
| *By adding a (private) `after_destroy:disable_wiki_module` callback that disables the wiki module after deletion of a project wiki, we prevent the need to explicitly have to disable the wiki module first, before (re-)enabling the module would eventually create a new project wiki and reset the `start_page`.*

I still think that it's a good idea to inform the user that deleting the wiki root page will automatically disable the module.

Sure. However, now that I have had a second look at this, I think that disabling the module after the deletion is a bit of an ugly workaround. A better solution would be to implement something like a 'no data' message when a project wiki is missing and add a way for users with the required permission(s) to reinstate a new wiki by just letting them add new pages from the front-end while creating a new project wiki in the background automatically if one is not yet available. That would also take away the need for an additional notification message. What do you think?

Btw: I think you got it but to be certain, when you wrote ...deleting the wiki root page... -> it's actually about deleting the project's wiki itself. I've written about this in more detail in message#61992.

**#8 - 2022-03-21 22:45 - Marius BALTEANU**

- File 34634.patch added
- Assignee deleted (Mischa The Evil)

What do you think if we create a new empty Wiki after deletion?

**#9 - 2022-03-27 23:17 - Marius BALTEANU**

- Target version changed from 5.0.0 to 5.1.0
