Target version:	5.0.0		
Resolution:	Fixed		
Description When importing a CSV file, file encoding is pre-selected according to <code>general_csv_encoding</code> in <code>config/locales/*.yaml</code> . For example, "CP932" is selected by default when your language setting is Japanese. I often use CSV files with UTF-8 encoding, but it's a bother to re-select UTF-8 in the encoding drop-down every time. It would be nice if Redmine auto guesses the file encoding when importing a CSV file. Redmine already auto guess file encoding when displaying attached files or repository contents using <code>Setting.repositories_encodings</code> .

- *File 34718.patch added*
- *Target version set to Candidate for next major release*

Here is a patch to implement this feature.

The patch guesses the encoding of CSV files by checking if the encoding is one of `Setting.repositories_encodings`. It fallbacks to `general_csv_encoding` if the auto-guess fails.
