

Redmine - Feature #34773

Redmine should be able to understand ":30" or ":5" in the Estimated time field of issues

Resolution:	Wont fix		
Description I think the current validation is too strict, and redmine should only look for a number and ":" to be contained in the field. A value of ":30" should be interpreted as 30 minutes and a value of ":5" as five minutes. There's really no need to ask the users to enter a leading zero for validation purposes.

To omit entering leading zero, how about using "30m" or "5m"? Redmine also accepts this format.

#2 - 2024-12-28 07:49 - Go MAEDA

- Status changed from New to Closed
- Resolution set to Wont fix
