

Redmine - Feature #34773

Redmine should be able to understand ":30" or ":5" in the Estimated time field of issues

Description	
<p>I think the current validation is too strict, and redmine should only look for a number and ":" to be contained in the field.</p> <p>A value of ":30" should be interpreted as 30 minutes and a value of ":5" as five minutes.</p> <p>There's really no need to ask the users to enter a leading zero for validation purposes.</p>
