| After rewriting the journal note, clicking the journal dropdown does not open the menu. Reloading will fix the menu to open.  
`screenshot-2021-04-01-9.00.30.png` |
| Updating the journal note runs the following code to redraw the journal actions. The problem is that the .drdn-trigger click event is not set in the dropdown that was redrawn at that time.  
```javascript
// https://www.redmine.org/projects/redmine/repository/revisions/20875/entry/trunk/app/views/journals/update.js.erb#L5
$(`#change-<%= @journal.id %> .journal-actions`).html('<%= escape_javascript(render_journal_actions(@journal.issue, @journal, :reply_links => authorize_for('issues', 'edit'))) %>');
```
| Related to #34714. |

**Associates revisions**

**Revision 20917 - 2021-04-06 07:46 - Go MAEDA**

Cannot open journal dropdown menu after editing note (#34998).

Patch by Mizuki ISHIKAWA.

**Revision 20918 - 2021-04-06 07:48 - Go MAEDA**

Merged r20917 from trunk to 4.2-stable (#34998).

**History**

**#1 - 2021-04-01 03:31 - Mizuki ISHIKAWA**

The following changes will resolve the issue.

```bash
diff --git a/public/javascripts/application.js b/public/javascripts/application.js
index e60425cae..4bb9d9551 100644

Mizuki, one question, why not binding directly on document?

Marius BALTEANU wrote:

Mizuki, one question, why not binding directly on document?

I used "#content, #header" because I thought it was better to narrow down the selector as much as possible. However, since $("#content, #header") contains almost all elements of Redmine, I think it makes no difference to change $("#content, #header") to $(document).

Committed the fix. Thank you.
