<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b> A cool feature would be a simple risk management app for projects.  You could specify facts and relate them to risks. Example:  Risk: Budget exceeded Facts: Need for tools is unknown, Need for lots of travels, etc  And then you would point out the impact and the probability (from 0 to 10) of that happening, and the system would calculate a risk factor based on that info.

I think this would work best as an external plugin. The plugin API should give you everything that is needed to integrate into Redmine's database and Projects.

Hello,

i am developing a plugin to do risks management.

You could see the code at [http://github.com/danielneis/Redmine-Risks-Management/tree/master/vendor/plugins/redmine\\_risks/](http://github.com/danielneis/Redmine-Risks-Management/tree/master/vendor/plugins/redmine_risks/)

I have uploaded a full version of redmine because i have altered the app/models/enumeration.rb to add enumerations for risk status and reponse strategies. i know it is not the best way to do so i have posted at plugins forum <http://www.redmine.org/boards/3/topics/9069> and will correct the code as soon as i get a response.

Hope you like.

Any comments and help are welcome.

[Isotrol RiskMNGT Redmine Plugin](#) manage the concepts of risk, incident, impact, probability, exposure level, mitigation strategy, contingency strategy, historic database according to the [OpenUP](#) and CMMi methodology.

It is a beta version.

You can download it here:

[http://forge.isotrol.org/projects/list\\_files/org00001-riskmngt](http://forge.isotrol.org/projects/list_files/org00001-riskmngt)

Unfortunately, the risk management plugin doesn't work in Redmine 1.1.0. Since the latest news in the plugin was announced more than 400 days ago, it is reasonable to develop completely new risk management plugin with the same philosophy.
