<b>Target version:</b>	
<b>Resolution:</b>	
<b>Description</b>	
<p>It would be useful export/import a redmine project into an xml so you can establish templates or baseline of projects. I think that the format could be mpx compatible type or any dtd so, it could be used templates in xml and only import them as needed or establish baselines so a project manager could review the status of a project in a given timen in case of an audit saving the baselines in the repository.</p> <p>Another option could be render the project issues and everything for a given date. As can be done in the repository module when a revision in selected diferent from the head.</p>

#### History

##### #1 - 2009-06-19 00:27 - Felipe Campo

related to #1125 , #531 , #886 awith another approach and the baseline option , this could be seen as 1 or 2 features , sorry but I cant edit the description

##### #2 - 2010-06-14 15:36 - Jérôme Bousquié

We would appreciate here too the possibility to import/export a full project from an instance of Redmine to another one (ie : some projects could migrate on student servers and others remain on research servers vice versa, according to security definitions).

##### #3 - 2010-08-19 11:07 - Lukas Hämmerle

Same here: We run two instances of redmine. An internal one only for our employees and only accessible from within the company network. And an external one where our community also has access to.

However, it has happened that a project initially was started as an internal-only project and then later on the project managers decided to make it available to the public.

Therefore, we would also appreciate an import/export feature.

##### #4 - 2010-10-06 12:29 - Joe Kandaba

Actually it would be nice to not only export/import a project once but to keep a project synchronized between 2 or more instances.. (That way company A and B can have a shared project in their respective Redmine instances...)

I would especially prefer this proposal from Felipe Campo:

*Another option could be render the project issues and everything for a given date. As can be done in the repository module when a revision is selected different from the head.*

This feature would allow a comparison of the current status of a project with the initially planned timeline with the gantt.
